Building High Powered, Multi-Skilled teams is harder than you think. Are we doing enough to make it happen?

We are living in interesting times, where technology has become the backbone to all companies. But, not all companies/businesses have embraced technology equally well, this is creating winners and leaders in various industries. The Good part is that all companies understand that embracing and adopting technology is key to their survival and growth. The challenge is more complex than that, the issue is that it's not one technology or business application that solves the problem.
